

EyeBot Privacy Policy

Effective date: August 7, 2026 | Last updated: August 7, 2026

1. Overview

This Privacy Policy explains how Joshua Luplow “Eyeofthenyte” (“we,” “us,” or “our”) collects, uses, discloses, and protects information when EyeBot is installed, accessed, or used. EyeBot is a multi-platform automation and community bot that may connect with Discord, Twitch, YouTube, Facebook, Kick, X/Twitter, Bluesky, TikTok, Instagram, Substack, Ko-fi, Google services, and other services enabled by a server administrator.

This policy applies to EyeBot’s hosted services, bot commands, administration interface, and related integrations. It does not govern the independent privacy practices of third-party platforms.

2. Information We Collect

Information received from platforms

- Account and platform identifiers, such as user, guild/server, channel, message, stream, post, and role identifiers.
- Profile information made available by a connected platform, such as display name, username, avatar, and public account metadata.
- Messages, commands, reactions, attachments, links, and other content submitted to EyeBot or placed in channels that an administrator configures EyeBot to monitor.

Configuration and connection information

- Server settings, command prefixes, enabled features, channel mappings, permissions, moderation settings, posting destinations, and other administrator-selected configuration.
- Authentication tokens, API keys, refresh tokens, webhooks, and similar credentials supplied by an administrator to connect services. Where supported, credentials are stored in an encrypted secrets store and are not intended to appear in ordinary logs.

Operational information

- Command events, job and queue status, delivery results, error messages, timestamps, rate-limit information, and diagnostic logs.
- Technical information reasonably necessary to operate and secure EyeBot, which may include IP address and browser information when the web administration interface is used.

Content from connected services

When enabled, EyeBot may retrieve or publish content such as livestream notices, video or community-post metadata, newsletters, podcasts, social posts, captions, and media selected for posting. EyeBot processes this content only as needed to perform configured functions.

3. How We Use Information

- Provide commands, alerts, moderation, content retrieval, cross-platform posting, and other enabled EyeBot features.
- Authenticate connections and communicate with third-party platform APIs.
- Maintain per-server settings, permissions, posting queues, and administrator controls.

- Detect failures, prevent duplicate processing, troubleshoot problems, protect EyeBot and connected communities, and enforce applicable terms.
- Comply with law, respond to valid legal requests, and protect the rights and safety of users, administrators, third parties, and the public.

We do not sell personal information or use EyeBot data for third-party targeted advertising.

4. Legal Bases Where Applicable

Where data-protection law requires a legal basis, we process information as necessary to provide the service requested by server administrators and users, for our legitimate interests in operating and securing EyeBot, to comply with legal obligations, and, where required, with consent. A server administrator may separately act as the controller of information processed in that administrator's community.

5. How Information Is Shared

We may disclose information in the following limited circumstances:

- Connected platforms and service providers. Information is sent to platforms and vendors as necessary to carry out requested actions, such as posting content, reading enabled feeds, sending notifications, or hosting EyeBot.
- Server administrators. Administrators may access server configuration, logs, queued content, and information visible within their communities, depending on their permissions.
- Legal and safety reasons. We may preserve or disclose information if reasonably necessary to comply with law, legal process, or valid government requests; enforce agreements; investigate abuse or security incidents; or protect rights and safety.
- Business changes. Information may be transferred as part of a merger, acquisition, financing, reorganization, or sale of assets, subject to appropriate protections.

We do not authorize third parties to use EyeBot information for purposes unrelated to providing or supporting the service.

6. Third-Party Services

EyeBot's integrations are optional and controlled by administrators. Each connected service processes information under its own terms and privacy policy. Administrators and users should review those policies before enabling or using an integration. Disconnecting an integration stops future EyeBot access but may not delete information already retained by that platform.

7. Data Retention

We retain information only for as long as reasonably necessary to provide EyeBot, maintain security and reliability, comply with legal obligations, and resolve disputes. Unless a different period is configured or legally required:

- Queued jobs and associated content are retained until completed, failed and reviewed, canceled, or cleared by an authorized administrator.
- Operational and error logs are retained for 30 DAYS.
- Server configuration is retained while EyeBot remains configured for that server and for 30 DAYS after removal or deactivation.

- Credentials are retained until replaced, revoked, disconnected, or deleted by an authorized administrator.

Backups may retain deleted information for a limited period before automatic overwrite. We may retain minimal records longer where required for security, fraud prevention, legal compliance, or dispute resolution.

8. Security

We use reasonable administrative, technical, and organizational safeguards designed to protect information, including access controls, separation of configuration and secrets, encrypted secret storage where supported, and restrictions on administrative commands. No service is completely secure. Administrators should grant EyeBot only the permissions it needs, protect credentials, rotate exposed tokens promptly, and keep the deployment updated.

9. Your Choices and Rights

- Users may stop interacting with EyeBot and may ask a server administrator to remove content or restrict bot access where the administrator controls that content.
- Administrators may disable features, disconnect integrations, revoke platform credentials, clear applicable queues, remove EyeBot, or request deletion of server-associated data.
- Depending on location, individuals may have rights to access, correct, delete, restrict, or object to processing; receive a portable copy; or withdraw consent. Identity and authority may need to be verified before a request is fulfilled.

Submit privacy requests to eyeofthenyte@gmail.com. Include enough information to identify the relevant account or server, but do not send passwords, API keys, or authentication tokens.

10. Children's Privacy

EyeBot is not directed to children under 13, and we do not knowingly collect personal information from children under 13. Users must also meet the minimum age required by the platforms they use and applicable law. If you believe a child provided personal information through EyeBot, contact us at eyeofthenyte@gmail.com so we can investigate and take appropriate action.

11. International Data Transfers

EyeBot and its providers may process information in countries other than the user's country. Where required, we use appropriate safeguards for cross-border transfers. Third-party platforms may independently transfer information according to their own policies.

12. Changes to This Policy

We may update this Privacy Policy to reflect changes to EyeBot, legal requirements, or our practices. We will revise the "Last updated" date and, when appropriate, provide additional notice through <https://github.com/eyeofthenyte/eyebot>. Continued use after an update is subject to the revised policy to the extent permitted by law.

13. Contact Us

Privacy questions and requests may be sent to:

Administrator Notice

If you install or configure EyeBot for a community, you are responsible for giving users any notices and obtaining any permissions required for your use of EyeBot. You should configure only necessary channels and features, limit access to administrative functions, and avoid directing EyeBot to collect sensitive personal information unless you have a lawful and necessary reason to do so.
